

# O stazi

# Poučne table

- ✓ Vrijeme gradnje/Time of building: 1930-1933
- ✓ Ukupna dužina/Length: 57 km
- ✓ Dužina u NP Sjeverni Velebit/Length within the Park: 16 km
- ✓ Prosječna širina/Average width: 1,20 m
- ✓ Najviša točka/Highest point: 1630 m, NP Sjeverni Velebit
- ✓ Najniža točka/Lowest point: 920 m, Baške Oštarije, Park prirode Velebit/Velebit Nature Park
- ✓ Prosječni nagib/Average inclination: 10%
- ✓ Najveći nagib/Largest inclination: 20%, sedlo Crikvena/Crikvena saddle, NP Sjeverni Velebit

Dragi posjetitelji!

Ljepoti Premužičeve staze nema se što dodati. Ipak, vođeni željom da o toj ljepoti saznate nešto više, osmislili smo poučne table koje smo postavili duž dijela staze koji se nalazi u Nacionalnom parku Sjeverni Velebit. Ukupno ih je 26, a uvest će vas u svijet geologije, biljnog i životinjskog svijeta te ljudi koji su nekoć ovdje živjeli i radili. Kako bi u poučnoj stazi mogli uživati i strani posjetitelji, izradili smo za njih vodič po stazi na nekoliko jezika.

Poučna staza, poput svih ostalih planinarskih staza u Parku, namijenjena je isključivo pješacima. Molimo Vas da se za vrijeme svog boravka u Parku pridržavate i ostalih pravila ponašanja, a ljepotu "uhvatite" samo fotoaparatom. Hvala!

## Interpretive panels

Dear visitors!

Nothing needs to be added to Premužić's trail beauty. Nevertheless, guided by a wish to provide you with a deeper understanding of this beauty, we have created interpretive panels set along the part of the trail passing through Northern Velebit National Park. Total of 26, which will guide you into the world of geology, plant and animal life and people that used to live and work here. To enable the foreign visitors to enjoy the educational trail as well, for them we made a guide through the trail in several languages.

The educational trail, like all other mountain trails in the Park, is intended exclusively for hikers. We ask you to abide by all other rules of conduct while in the Park, and „capture“ the beauty with your camera only. Thank you!

# Ostvareni san

Ante Premužić

Izgradnjom staze olakšan je pristup u najnepristupačnije dijelove Velebita domaćem stanovništvu, brojnim znanstvenicima i posjetiteljima. Staza nema velikih uspona, pa njome mogu proći i ljudi nenavikli na planinarenje.

Ante Premužić (1889-1979), šumarski inženjer i strastveni planinar, rodom iz slavonskog Kobaša, bio je jedan od najznamenitijih graditelja putova i staza po Velebitu. Najveća i najljepša staza kasnije je nazvana po njemu.

*"Tko bude u budućnosti gotovim ovim lijepim i komodnim putem prolazio, jedva će si moći da predstavi trud i napore, koje su morali da podnesu prvi pioniri, koji su se kretali ovim teško prohodnim terenom bez ikakvih staza...".*

*Dr. Ivan Krajač, časopis Hrvatski planinar, 1931. god.*

Osnovna ideja gradnje uzdužnog visinskog velebitskog puta bilo je turističko otvaranje Velebita. Gradnja staze započela je 1930., a završila 1933. godine. Gradnju su zajednički financirali Direkcija šuma na Sušaku, Hrvatsko planinarsko društvo i Kraljevska banska uprava Savske banovine. Radove su, kad god je oštra klima dopuštala, izvodili brojni majstori iz podvelebitskih sela primorske padine Velebita.

Na stazi ili u njezinoj blizini nalazi se nekoliko planinarskih objekata, koji pružaju sklonište planinarima. Jedan od najpoznatijih je Rossijeva koliba podno Pasarićeva kuka u Rožanskim kukovima. Sa staze se odvaja nekoliko uspona na neke od najljepših vrhunaca sjevernog i srednjeg Velebita - Gromovaču, Crikvenu, Šatorinu i druge.

Rossijeva koliba/Rossi's hut

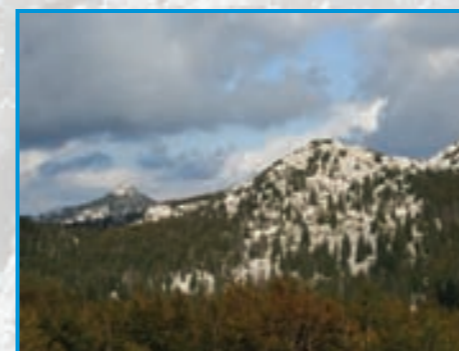

# Dreams came true

*„Whoever in the future comes to walk on this beautiful and comfortable trail will hardly be able to imagine all the hard work and effort the first pioneers had to endure while walking through this difficult terrain with no trail whatsoever.“*

*Dr. Ivan Krajač, "Croatian Mountaineer" Newsletter, 1931.*

Construction of the trail opened access to the most impenetrable parts of Velebit to local people, numerous scientists and visitors. There are no steep climbs on the trail so that people not used to mountaineering can easily manage it.

Ante Premužić (1889-1979), a forestry engineer and a passionate mountaineer born in a small Slavonian village Kobaši, was one of the most famous road and trail builders in Velebit. The longest and most beautiful trail was later named after him.

The basic idea of constructing a high trail along Velebit's ridge was opening the mountain to tourism. Construction of the trail began in 1930 and was completed in 1933. The Forestry Directorate in Rijeka, Croatian Mountaineering Society and the Royal Banate Administration of the Sava Banate financed it. Numerous craftsmen from villages at the coastal side of Velebit carried out the work whenever the weather conditions would permit it.

Along the trail and in its vicinity, there are several mountain houses, giving shelter to mountaineers. One of the most famous is "Rossijeva koliba" ("Rossi's hut") at the foot of Pasarić kuk in Rožanski kukovi. There are several climbs branching from the trail, leading to some of the most beautiful peaks of northern and middle Velebit - Gromovača, Crikvena, Šatorina and others.
